

CLOUD BACKUP

OFFSITE PROTECTION FOR MISSION-CRITICAL DATA

You may already be backing up your data on-premise using Veeam's powerful backup software, but only offsite cloud backup provide the highest level of data protection and redundancy. As a Platinum level Cloud Service Provider with Veeam, INAP delivers platform expertise, high performance and complimentary services you won't find anywhere else. Powered by Veeam Cloud Connect, our Cloud Backup is an affordable and secure way to guarantee data protection.

THE INAP DIFFERENCE

Enterprise-Grade SAN Storage

Not all storage is created equal. INAP's high-speed storage platform is powered by Nimble Enterprise SAN arrays, meaning you'll have the IOPS to quickly recover critical data.

Recovery in the Cloud

If a primary system failure prevents you from accessing your data, SafetyNet—a complimentary premium service—restores your backup to a private cloud environment.

Full Control, Hassle-Free

Backups are managed via your current Veeam portal: No new software to install and zero integration work. Schedule, configure and test your backups straight from your existing Veeam console.

Securely Seed Data With Ease

Transferring large amounts of data over the web isn't optimal. Our DART Box seeding system allows you to securely transfer large amounts of data into your offsite cloud repository.

PRODUCT FEATURES

	STANDARD	PREMIUM
OVERVIEW	Designed for high-volume, long-term retention of Veeam backup data. Protect large amounts of VM data in the INAP cloud, making efficient use of your backup budget.
